Subject Index

A
ABC transporters
  Ralstonia solanacearum genome and, 110
Acaricides
  disease progress analysis and, 70, 75
Acetate
  Ralstonia solanacearum genome and, 110
Acetosyringone
  multi-host/pathogen interactions and, 452–53, 455
Achlya spp.
  spermosphere microbial dynamics and interactions, 281
Acidobacterium spp.
  microbial diversity in soil and, 248
Acidovorax avenae
  integrated approaches for detection and diagnosis of disease, 343, 352
Acinetobacter spp.
  microbial diversity in soil and, 248
  spermosphere microbial dynamics and interactions, 281
Actinobacillus actinomycetemcomitans
  Ralstonia solanacearum genome and, 117–18
Adaptation
  comparative genomics analyses of citrus-associated bacteria and, 163–64
  multi-host/pathogen interactions and, 439
  Ralstonia solanacearum genome and, 107, 109, 122, 127
Additive dominance effects
  disease progress analysis and, 68
Aegilops squarrosa
  Fusarium head blight resistance and, 144
Africa
  multi-host/pathogen interactions and, 441
  tobacco mosaic virus and, 16
African cassava mosaic disease
  disease progress analysis and, 71, 74
afuE gene
  spermosphere microbial dynamics and interactions, 292
Agienchus agricola
  nematode evolution of plant parasitism and, 93
Agrobacterium spp.
  microbial diversity in soil and, 248, 252
  Ralstonia solanacearum genome and, 117
  spermosphere microbial dynamics and interactions, 282
Agrobacterium tumefaciens
  integrated approaches for detection and diagnosis of disease, 343, 354
  microbial diversity in soil and, 252
  multi-host/pathogen interactions and, 439, 441–42, 451–58
Agroecosystems
  disease progress analysis and, 71
  microbial diversity in soil and, 249–50, 252, 256–58
  nematode molecular diagnostics and, 367–79
  soil microbial community structure management for disease suppression, 40, 44, 52
  tobacco mosaic virus and, 13, 15–20
Alcaligenes spp.
  microbial diversity in soil and, 248
Alkaline phosphatases
  Ralstonia solanacearum genome and, 113
Allomones
  multi-host/pathogen interactions and, 458
Alternaria solani
  disease progress analysis and, 72
Amendments
  microbial diversity in soil and, 261–62
  soil microbial community structure management for disease suppression, 35, 46–48
Amplicons
  soil microbial community structure management for disease suppression, 41–42
Amplified fragment length polymorphism (AFLP)

Fusarium head blight resistance and, 146–47
integrated approaches for detection and diagnosis of disease, 350, 356
nematode molecular diagnostics and, 375
Amplified rDNA restriction analysis (ARDRA)
microbial diversity in soil and, 246
Amylases
spermosphere microbial dynamics and interactions, 276
Anguina sp.
nematode evolution of plant parasitism and, 94
Ankyrin
Ralstonia solanacearum genome and, 115
Antibiotics
history of research, 8
multi-host/pathogen interactions and, 444
Ralstonia solanacearum genome and, 112
soil microbial community structure management for disease suppression, 44
spermosphere microbial dynamics and interactions, 292–93
Antilles archipelago
tobacco mosaic virus and, 16
Aphanomyces spp.
disease progress analysis and, 72
spermosphere microbial dynamics and interactions, 288
Aphelenchida
nematode evolution of plant parasitism and, 83, 87–88
Aphelenchoides sp.
nematode evolution of plant parasitism and, 88, 93
Aphelenchus sp.
nematode evolution of plant parasitism and, 87, 93
API strip tests
integrated approaches for detection and diagnosis of disease, 356
Apical dominance
systemic acquired resistance and, 200
Apigenin
spermosphere microbial dynamics and interactions, 286
Apoptosis
subviral satellite and defective interfering RNAs, 415, 422–23
type III secretion system effector proteins and, 387–88
Appalachia
biological control of chestnut blight with hypovirulence and, 323
Arabidopsis thaliana
microbial diversity in soil and, 250
Ralstonia solanacearum genome and, 115
subviral satellite and defective interfering RNAs, 424, 426, 428
systemic acquired resistance and, 185, 187–90, 192–95, 197, 199–200
tobacco mosaic virus and, 18
Area under the disease progress curve (AUDPC)
disease progress analysis and, 65–75
Arizona
microbial diversity in soil and, 249
Arthrobacter spp.
microbial diversity in soil and, 248–49
Asclepias syriaca
history of research, 6
Ascorbate peroxidase
systemic acquired resistance and, 191
Ascorbic acid oxidase
Fusarium head blight resistance and, 141
Ascorbic acid peroxidase
Fusarium head blight resistance and, 141
Ascospores
biological control of chestnut blight with hypovirulence and, 313, 325, 329
Fusarium head blight resistance and, 136–37
Asia
biological control of chestnut blight with hypovirulence and, 311, 313, 318, 328
Astragalus spp.
multi-host/pathogen interactions and, 444
atwhy1 gene
systemic acquired resistance and, 197
Australia
disease progress analysis and, 65
microbial diversity in soil and, 262
tobacco mosaic virus and, 28
Autokinases
multi-host/pathogen interactions and, 452
avr genes
comparative genomics

analyses of citrus-associated bacteria and, 163–64, 174
Ralstonia solanacearum genome and, 115–16, 121–27
Azospirillum spp.
microbial diversity in soil and, 252
spermosphere microbial dynamics and interactions, 295
Azotobacter vinelandii
Ralstonia solanacearum genome and, 116

B

Bacillus spp.
microbial diversity in soil and, 246, 248, 252, 257–58
soil microbial community structure management for disease suppression, 49
spermosphere microbial dynamics and interactions, 281, 287–89, 291, 293, 295
Bacterial adhesion
Ralstonia solanacearum genome and, 107, 117–18
Bacterial wilt
Ralstonia solanacearum genome and, 107
Bacteriocins
history of research, 1, 4, 6
Bacteriophages
history of research, 1, 4
tobacco mosaic virus and, 14
Bacteroides spp.
microbial diversity in soil and, 248
Balkan Peninsula
biological control of chestnut blight with hypovirulence and, 315
Banana streak virus
disease progress analysis and, 71
Barcode
multi-host/pathogen interactions and, 440
nematode molecular diagnostics and, 367, 370–72, 378
Barc primers
Fusarium head blight resistance and, 147
Barley
Fusarium head blight resistance and, 135–54
Barley yellow dwarf virus
disease progress analysis and, 62
Basal defenses
type III secretion system effector proteins and, 387–88
Basiria spp.
nematode evolution of plant parasitism and, 91
Belonolaimus sp.
nematode evolution of plant parasitism and, 93
Benomyl
disease progress analysis and, 70
Benzoate
Ralstonia solanacearum genome and, 110
Benzoquinones
multi-host/pathogen interactions and, 445–47
Benzothiazole
disease progress analysis and, 70
Bioassays
integrated approaches for detection and diagnosis of disease, 354
Biochips
integrated approaches for detection and diagnosis of disease, 357
Biocides
nematode molecular diagnostics and, 369–70
Biodiversity assessments
nematode molecular diagnostics and, 367
Biofilms
Ralstonia solanacearum genome and, 127
Bioinformatics
nematode evolution of plant parasitism and, 100
type III secretion system effector proteins and, 385–404
Biological control
biological control of chestnut blight with hypovirulence and, 311–31
disease progress analysis and, 72
spermosphere microbial dynamics and interactions, 271, 283, 287, 293, 295
BIO-PCR
integrated approaches for detection and diagnosis of disease, 351, 355
Biosecurity
science-based decision making and, 9
Biosensors
integrated approaches for detection and diagnosis of disease, 357
Biotechnology
Fusarium head blight resistance and, 154
policy and, 1, 5, 7–9
tobacco mosaic virus and, 14, 22
Bipartite genome
Ralstonia solanacearum

genome and, 108–9
Bipolaris sorokiniana
disease progress analysis and, 68
BLAST program
nematode evolution of plant parasitism and, 98
Ralstonia solanacearum genome and, 125
BLASTSIM program
disease progress analysis and, 67
Blight
biological control of with hypovirulence, 311–31
Fusarium head blight resistance and, 135–54
BLIGHT simulation model
disease progress analysis and, 64
BLITECAST forecasting model
disease progress analysis and, 64
Botrytis cinerea
disease progress analysis and, 62
bph genes
Ralstonia solanacearum genome and, 116
Bradyrhizobium spp.
history of research, 6
spermosphere microbial dynamics and interactions, 295
Brassica spp.
microbial diversity in soil and, 254
soil microbial community structure management for disease suppression, 45, 48
Brazil
Fusarium head blight resistance and, 143
Breeding
Fusarium head blight resistance and, 143, 149–52
Brevibacterium spp.
microbial diversity in soil and, 248
Broad bean mottle virus
subviral satellite and defective interfering RNAs, 416
BTH
systemic acquired resistance and, 191, 200, 202
Burkholderia cepacia
history of research, 6
integrated approaches for detection and diagnosis of disease, 349
microbial diversity in soil and, 254
soil microbial community structure management for disease suppression, 49–50
spermosphere microbial dynamics and interactions, 291, 294
Burkholderia spp.
microbial diversity in soil and, 259
Ralstonia solanacearum genome and, 120
spermosphere microbial dynamics and interactions, 281
Bursaphelenchus sp.
nematode evolution of plant parasitism and, 87, 93, 98

C

Cactodera weissi
nematode evolution of plant parasitism and, 93
Caenorhabditis elegans
nematode evolution of plant parasitism and, 95–98
nematode molecular diagnostics and, 368, 372
tobacco mosaic virus and, 18, 22
California
nematode molecular diagnostics and, 370
subviral satellite and defective interfering RNAs, 423
Calomel reference electrode
multi-host/pathogen interactions and, 446
Camouflage
multi-host/pathogen interactions and, 444
cAMP phosphodiesterase
spermosphere microbial dynamics and interactions, 286
Canada
biological control of chestnut blight with hypovirulence and, 313, 322
Fusarium head blight resistance and, 136
Canker
biological control of with hypovirulence, 311–31
comparative genomics analyses of citrus-associated bacteria and, 163–81
Capsids
olpidium and plasmodiophorid vectors in plant virus transmission, 211–34
tobacco mosaic virus and, 21–22
Carbohydrates
spermosphere microbial dynamics and interactions, 279, 289–90

Carbon
multi-host/pathogen interactions and, 439, 452–53
soil microbial community structure management for disease suppression, 38–39
spermosphere microbial dynamics and interactions, 271–72, 274, 291–93
Carboxylesterases
Ralstonia solanacearum genome and, 116
Cardamine chlorotic fleck virus
subviral satellite and defective interfering RNAs, 426
Carnation Italian ringspot virus
subviral satellite and defective interfering RNAs, 419
Castanaea spp.
biological control of chestnut blight with hypovirulence and, 311
Catabolism
Ralstonia solanacearum genome and, 109, 116
Catalase
Fusarium head blight resistance and, 141
multi-host/pathogen interactions and, 444
Catechol (2-hydro-1,2 dihydroxybenzoate)
Ralstonia solanacearum genome and, 110
Cell trafficking
tobacco mosaic virus and, 13, 23–27
Cellulases
nematode evolution of plant parasitism and, 98
Cell wall
comparative genomics analyses of citrus-associated bacteria and, 163–64, 172–73
multi-host/pathogen interactions and, 440, 444–45, 450, 457
type III secretion system effector proteins and, 385–404
cep1 gene
systemic acquired resistance and, 200
Cephalobina
nematode evolution of plant parasitism and, 89–91, 96
Cephaloboidea spp.
nematode evolution of plant parasitism and, 91, 96, 99
Cephalosporium spp.
spermosphere microbial dynamics and interactions, 281
Cercospora leaf spot
disease progress analysis and, 70
CERERS-RICE model
disease progress analysis and, 67
Chaperones
type III secretion system effector proteins and, 385, 391–92
Charging
multi-host/pathogen interactions and, 448–50
Châteaurenard soil
soil microbial community structure management for disease suppression, 48
Chemical biology
multi-host/pathogen interactions and, 439–58
Chemical host resistance
disease progress analysis and, 69–71
Chemical perception
multi-host/pathogen interactions and, 439, 458
Chemotaxis
comparative genomics analyses of citrus-associated bacteria and, 176
spermosphere microbial dynamics and interactions, 287–88
Chestnut blight
biological control of with hypovirulence, 311–31
China
biological control of chestnut blight with hypovirulence and, 313, 318, 328
Fusarium head blight resistance and, 135–36, 141, 143–46, 148, 150–53
tobacco mosaic virus and, 16
Chitinase
Fusarium head blight resistance and, 141
Chlamydospores
Fusarium head blight resistance and, 136
spermosphere microbial dynamics and interactions, 279–80, 285–87
Chlorogenic acid
Fusarium head blight resistance and, 142
Chloroplast endosymbiosis
multi-host/pathogen interactions and, 439
Chlorosis
subviral satellite and defective interfering RNAs, 424
systemic acquired

resistance and, 200
Chorismate mutase
nematode evolution of plant parasitism and, 98
chr gene
Ralstonia solanacearum genome and, 111
Chromosome 3BS
Fusarium head blight resistance and, 135, 146–48, 153–54
CIMMYT program
Fusarium head blight resistance and, 143, 145, 147, 150–52
Citrus-associated bacteria
comparative genomics analyses
cell wall-degrading enzymes, 172–73
chemotaxis, 176
colicins, 179–80
conclusions, 180–81
energy metabolism, 173–74
flagellum, 176
functional regulators, 178–79
introduction, 164
iron uptake, 174–75
metabolism, 174–75
overrepresented genes, 179
restriction and modification system, 180
rpf genes, 176–77
sugar uptake, 173
transcriptional factors, 178–79
type II secretion system, 168
type III secretion system, 175–76
type IV pili system, 179
xanthan gum biosynthesis genes, 178
xanthomonadins, 177–78
Xanthomonas axonopodis pv. *citri*/*Xanthomonas campestris* pv. *campestris*, 166–67
Xanthomonas axonopodis pv. *citri*/*Xyllela fastidiosa 9a5c*, 167–80
Xylella fastidiosa 9a5c/other strains of *Xyllela fastidiosa*, 165–66
Clavibacter michiganensis
history of research, 5–6
integrated approaches for detection and diagnosis of disease, 342–43, 346–47, 349, 354
Climate
biological control of chestnut blight with hypovirulence and, 329
disease progress analysis and, 65–66
Clone libraries
microbial diversity in soil and, 246
Clostridium spp.
microbial diversity in soil and, 248
CmPP16 protein
tobacco mosaic virus and, 25
cnr gene
Ralstonia solanacearum genome and, 111
CO1 gene
nematode molecular diagnostics and, 371, 375, 379
Coat proteins
olpidium and plasmodiophorid vectors in plant virus transmission, 221
subviral satellite and defective interfering RNAs, 415, 418, 427–30
Coevolution
Ralstonia solanacearum genome and, 119–20
tobacco mosaic virus and, 29
type III secretion system effector proteins and, 402–3
Colicins
comparative genomics analyses of citrus-associated bacteria and, 163–64, 168, 179–80
Colletotrichum acutatum
disease progress analysis and, 62
Colombia
nematode molecular diagnostics and, 370
Commensalism
multi-host/pathogen interactions and, 439
Community-level physiological profiling (CLPP)
microbial diversity in soil and, 245, 251, 253–54
soil microbial community structure management for disease suppression, 38–39
Community structure
microbial diversity in soil and, 243–63
Comparative epidemiology
disease progress analysis and, 65–66
Comparative genomics
citrus-associated bacteria and, 163–81
Ralstonia solanacearum genome and, 128
type III secretion system

effector proteins and, 388–91
Competition
multi-host/pathogen interactions and, 439
subviral satellite and defective interfering RNAs, 417–19
Conidia
biological control of chestnut blight with hypovirulence and, 329
Coniferyl alcohol
multi-host/pathogen interactions and, 453
Conjugative plasmid transfer
spermosphere microbial dynamics and interactions, 291–92
Conjugative transposon
Ralstonia solanacearum genome and, 116–17
Connecticut
biological control of chestnut blight with hypovirulence and, 319–20
tobacco mosaic virus and, 17
Conserved effector locus
Ralstonia solanacearum genome and, 119
Contingency loci
Ralstonia solanacearum genome and, 127–28
Convergent evolution
nematode evolution of plant parasitism and, 83, 92–94
Ralstonia solanacearum genome and, 122
subviral satellite and defective interfering RNAs, 425
Cooperational PCR (Co-PCR)
integrated approaches for detection and diagnosis of disease, 349
cop gene
Ralstonia solanacearum genome and, 111
Copper hydroxide
disease progress analysis and, 70
Copper resistance
Ralstonia solanacearum genome and, 111–12
Coppice stands
biological control of chestnut blight with hypovirulence and, 315–17, 330
Corynebacterium spp.
microbial diversity in soil and, 248
Cosienchus costatus
nematode evolution of plant parasitism and, 93
cpr genes
systemic acquired resistance and, 190, 200
Criconemella sp.
nematode evolution of plant parasitism and, 93
Cropping effect
microbial diversity in soil and, 260–61
Cropping sequences
soil microbial community structure management for disease suppression, 38
Cropping systems
disease progress analysis and, 64
nematode molecular diagnostics and, 367–79
soil microbial community structure management for disease suppression, 48–51
Crop resistance
tobacco mosaic virus and, 13, 25–27
Crown gall tumors
multi-host/pathogen interactions and, 439, 441–42, 451–57
Cryphonectria parasitica
biological control of chestnut blight with hypovirulence and, 311–31
Cucumber mosaic virus
subviral satellite and defective interfering RNAs, 415, 421–25
Cucumber necrosis virus
olpidium and plasmodiophorid vectors in plant virus transmission, 211, 231–34
Cucumis melo
disease progress analysis and, 68
Cunninghamella spp.
spermosphere microbial dynamics and interactions, 281
Curtobacterium spp.
history of research, 5, 7
spermosphere microbial dynamics and interactions, 281
cvp genes
comparative genomics analyses of citrus-associated bacteria and, 180
Cycloheximide
systemic acquired resistance and, 199
Cyclopropylbenzoquinone (CPBQ)
multi-host/pathogen interactions and, 447
cyd genes
comparative genomics analyses of

citrus-associated bacteria and, 174
Cylindrocarpon spp.
spermosphere microbial dynamics and interactions, 281
Cymbidium ringspot virus
subviral satellite and defective interfering RNAs, 420
cyo genes
comparative genomics analyses of citrus-associated bacteria and, 174
Cysteine protease
type III secretion system effector proteins and, 385
Cytoplasm
multi-host/pathogen interactions and, 445, 452, 455–56
type III secretion system effector proteins and, 385, 391–92
czc gene
Ralstonia solanacearum genome and, 111

D

2,4-D
microbial diversity in soil and, 252, 256
Dactylella oviparisitica
soil microbial community structure management for disease suppression, 45
Damping-off
spermosphere microbial dynamics and interactions, 294
Dauers
nematode evolution of plant parasitism and, 95–96
Decomposition
soil microbial community structure management for disease suppression, 47
Defective interfering RNA (DI RNA)
subviral satellite RNA and, 415–31
Defense response
Fusarium head blight resistance and, 141–42
multi-host/pathogen interactions and, 444
Ralstonia solanacearum genome and, 116
spermosphere microbial dynamics and interactions, 287
subviral satellite and defective interfering RNAs, 423
systemic acquired resistance and, 185–202
type III secretion system effector proteins and, 387–88
Denaturing gradient gel electrophoresis (DGGE)
integrated approaches for detection and diagnosis of disease, 349
microbial diversity in soil and, 246, 251, 253–55, 257
soil microbial community structure management for disease suppression, 36, 41–43, 47, 49
Deoxynivelenol (DON)
Fusarium head blight resistance and, 135–36, 139–42, 144, 146–49, 153–54
Detection/diagnosis of bacteria and disease
integrated approaches for bioassays, 354
conclusions, 357
confirmation, 354–55
culture, 351–53, 355–56
diagnosis, 352–56
DNA-based tests, 354–55
ELISA, 346
enrichment assays, 350–51
FISH, 352
flow cytometry, 347
genotypic approaches, 347–50, 355–56
hybridoma technology, 345
immunodiagnosis, 342–47, 354–55
immunofluorescence, 347, 352
immunomagnetic separations, 347, 351–52
integrating several methods for detection and identification, 350–52
introduction, 339–40
known pathogens, 340–54
lateral flow devices, 346
miscellaneous approaches/resources, 350, 355–56
monoclonal antibodies, 345–46
new or unknown pathogens and diseases, 355
pathogenicity tests, 354
PCR, 351–52
phenotypic tests, 355–56
polyclonal antisera, 345–46
polyphasic approaches, 352, 356
population structure, 342, 345
pure culture, 355–56

subspecific variation of pathogens, 345
Dextran
tobacco mosaic virus and, 24
Dextrinases
spermosphere microbial dynamics and interactions, 276
2,4-Diacetylphloroglucinol (DAPG)
microbial diversity in soil and, 254, 260
soil microbial community structure management for disease suppression, 35, 46, 48–51
spermosphere microbial dynamics and interactions, 292–93
DICER enzyme
subviral satellite and defective interfering RNAs, 420
Dichlorofluorescein diacetate ($DCFH_2$-DA)
multi-host/pathogen interactions and, 444–45
Diconiferyl alcogol glycoside D (DCG-D) plant growth factor
multi-host/pathogen interactions and, 453
3,4-Dihydroxybenzoate
Ralstonia solanacearum genome and, 110
2,5-Dimethoxy-p-benzoquinone (DMBQ)
multi-host/pathogen interactions and, 442, 446, 448–49
Dimethy diferulate (DDF) synthetic analogs
multi-host/pathogen interactions and, 453
2,6-Dinitrofluorobenzene (DNFB)
multi-host/pathogen interactions and, 455
dir1 gene
systemic acquired resistance and, 187, 201
Disease management
disease progress analysis and, 64–65, 75
Fusarium head blight resistance and, 135–54
soil microbial community structure management for disease suppression, 35–52
Disease progress
analysis of as a basis for evaluating disease management practices
bacterial disease, 71
biological control, 72
chemical control, 69–71
chemical inducers of systemic resistance, 70
climate, 65–66
comparative epidemiology, 65–66
components of disease cycle, 62, 64
conclusions, 75
cropping systems, 64
crop yield, 69
cultural control, 72–74
descriptive models, 65
disease development, 69
disease management, 64–65
disease progress curves, 63, 65–66
economic models, 65
epidemiology, 62–63
field of resistant cultivars, 71–72
foliar fungal diseases, 72
gene mapping, 67
genetic analysis, 67
heritability of resistance, 68
host development, 69–70
host growth habit, maturity, and type, 73–74
host resistance, 70
inoculum sources, 66
integrated pest/disease management, 64–65, 75
intercropping, 74
introduction, 61–62
irrigation, 73
mathematical models, 62–65
models and disease management, 64–65
multilines, 74
nitrogen fertilizers, 73
pathogen isolates and strains, 68–69
physical treatments, 71
physiology of disease-damage relationships, 64
plant breeding, 67–68
plant growth regulators, 71
population scaling-up of control practices, 64
process-based computer models, 63
progress curves, 63, 65–66
residue management, 72
soilborne disease, 71
sowing date, 73
spatial pattern analysis, 62
spatio-temporal dynamics, 63
stochastic formulations of epidemic models, 63
systemic resistance, 70
theoretical population models, 63

tillage systems, 72
transplanting date, 73
varietal mixtures, 74
vector control, 70
viral diseases, 71
yield loss, 66–67, 69
Dispersal stage
nematode evolution of plant parasitism and, 95–96
Ditylenchus sp.
nematode evolution of plant parasitism and, 94, 98
Diversity
biological control of chestnut blight with hypovirulence and, 323–27
disease progress analysis and, 74
microbial diversity in soil and, 243–63
multi-host/pathogen interactions and, 441
nematode evolution of plant parasitism and, 84
nematode molecular diagnostics and, 371
olpidium and plasmodiophorid vectors in plant virus transmission, 211–34
DNA-based detection methods
integrated approaches for detection and diagnosis of disease, 339, 341, 348, 354–55, 367
soil microbial community structure management for disease suppression, 40–43, 45
dna genes
Ralstonia solanacearum genome and, 108
DNA microarray analysis
Fusarium head blight resistance and, 142, 154
microbial diversity in soil and, 246, 262
Ralstonia solanacearum genome and, 128
systemic acquired resistance and, 197–98
DNA sequencing analysis
integrated approaches for detection and diagnosis of disease, 355–56
DNA taxonomy
nematode molecular diagnostics and, 367–79
Dolichodorus heterocephalus
nematode evolution of plant parasitism and, 93
Dormant stage
nematode evolution of plant parasitism and, 95–96
Dorylaimida
nematode evolution of plant parasitism and, 83, 85–86, 88, 91, 95
nematode molecular diagnostics and, 369
Drosophila spp.
tobacco mosaic virus and, 18, 22
Drug resistance
Ralstonia solanacearum genome and, 111–12
dth9 gene
systemic acquired resistance and, 197

E

Ecological island
Ralstonia solanacearum genome and, 117
Ecology
microbial diversity in soil and, 243–63
nematode molecular diagnostics and, 367–79
soil microbial community structure management for disease suppression, 35–52
spermosphere microbial dynamics and interactions, 271–96
Ectoparasitism
nematode evolution of plant parasitism and, 92
Ecuador
disease progress analysis and, 74
eds genes
systemic acquired resistance and, 187–90, 198–99
Effectors
Ralstonia solanacearum genome and, 107, 114–16, 121–26
eIF4F host factor
tobacco mosaic virus and, 22
Electron transfer
multi-host/pathogen interactions and, 439–40, 445, 457–58
Elymus giganteus
Fusarium head blight resistance and, 144, 152
Endoparasitism
nematode evolution of plant parasitism and, 83, 92
Endophytes
research projections to 2025, 10
Endoplasmic reticulum
tobacco mosaic virus and, 24–25
Endosymbiosis
multi-host/pathogen interactions and, 439
England
tobacco mosaic virus and, 16

Enrichment assays
integrated approaches for detection and diagnosis of disease, 350–51
Enterobacter spp.
integrated approaches for detection and diagnosis of disease, 354
microbial diversity in soil and, 248
spermosphere microbial dynamics and interactions, 281, 289–90, 294–95
Enterococcus faecium
history of research, 3
Environmental sensing
multi-host/pathogen interactions and, 458
Enzyme-linked immunosorbent assay (ELISA)
integrated approaches for detection and diagnosis of disease, 346, 350–51, 355
Epidemics
biological control of chestnut blight with hypovirulence and, 311, 315, 328–29
disease progress analysis and, 61, 63, 69, 71, 73
Fusarium head blight resistance and, 136
Epidemiology
biological control of chestnut blight with hypovirulence and, 328–30
disease progress analysis and, 61, 65–66, 75
integrated approaches for detection and diagnosis of disease, 357
subviral satellite and defective interfering RNAs, 424
Epigeal germination
spermosphere microbial dynamics and interactions, 274
EPIMUL epidemic model
disease progress analysis and, 63
Epinasty
subviral satellite and defective interfering RNAs, 423
ERIC analysis
integrated approaches for detection and diagnosis of disease, 356
Erwinia spp.
history of research, 6
integrated approaches for detection and diagnosis of disease, 342–43, 346, 349–51
Ralstonia solanacearum genome and, 116, 120
Erysiphe orontii
systemic acquired resistance and, 190
Escherichia coli
integrated approaches for detection and diagnosis of disease, 348
soil microbial community structure management for disease suppression, 41
spermosphere microbial dynamics and interactions, 294
Ethylene
subviral satellite and defective interfering RNAs, 423
etr1 gene
systemic acquired resistance and, 199
Europe
biological control of chestnut blight with hypovirulence and, 311–13, 315–18, 322–25, 328–30
Fusarium head blight resistance and, 136–37, 145
integrated approaches for detection and diagnosis of disease, 347
tobacco mosaic virus and, 16–17
Evolution
multi-host/pathogen interactions and, 439
nematode evolution of plant parasitism and, 83–100
nematode molecular diagnostics and, 371
Ralstonia solanacearum genome and, 119–21
subviral satellite and defective interfering RNAs, 423–25
type III secretion system effector proteins and, 402–3
Exchangeable effector locus (EEL)
Ralstonia solanacearum genome and, 119
Expansins
multi-host/pathogen interactions and, 449–50
Exploitation
nematode evolution of plant parasitism and, 92–96
Expressed sequence tags (ESTs)
Fusarium head blight resistance and, 142
exu genes
comparative genomics analyses of citrus-associated bacteria and, 173

F
Fatty acid methyl esters (FAME) analysis
integrated approaches for detection and diagnosis of disease, 341, 355–56
microbial diversity in soil and, 251
soil microbial community structure management for disease suppression, 39–40
Feeding styles
nematode evolution of plant parasitism and, 92–94
Fertilizers
disease progress analysis and, 73
microbial diversity in soil and, 252, 256–57
Ferulate
Ralstonia solanacearum genome and, 110
Field detection/identification of pathogens
research projections to 2025, 10
Field performance of resistant cultivars
disease progress analysis and, 71–72
Filienchus sp.
nematode evolution of plant parasitism and, 93
fimA gene
integrated approaches for detection and diagnosis of disease, 348
Fingerprinting
integrated approaches for detection and diagnosis of disease, 354–55
microbial diversity in soil and, 246–47, 253
"Fit"
subviral satellite and defective interfering RNAs, 424
Fitness
biological control of chestnut blight with hypovirulence and, 327
multi-host/pathogen interactions and, 439
subviral satellite and defective interfering RNAs, 428–30
systemic acquired resistance and, 200–2
Fitness island
Ralstonia solanacearum genome and, 117
Flagella
comparative genomics analyses of citrus-associated bacteria and, 176
Flavanones
spermosphere microbial dynamics and interactions, 286
Flavins
multi-host/pathogen interactions and, 442, 444
Flavobacterium spp.
microbial diversity in soil and, 248
Flavones
multi-host/pathogen interactions and, 443
spermosphere microbial dynamics and interactions, 286
Flavonoids
spermosphere microbial dynamics and interactions, 277, 286
Florida
nematode molecular diagnostics and, 370
Flow cytometry
integrated approaches for detection and diagnosis of disease, 347
Fluorescent in situ hybridization (FISH)
integrated approaches for detection and diagnosis of disease, 349, 352
Flurprimidol
disease progress analysis and, 71
Foliar fungal diseases
disease progress analysis and, 72
Foot and mouth disease
tobacco mosaic virus and, 13
Forests
biological control of chestnut blight with hypovirulence and, 311–12, 315–19, 330
disease progress analysis and, 65
microbial diversity in soil and, 252
Fosetyl Al
disease progress analysis and, 70
France
biological control of chestnut blight with hypovirulence and, 315–16, 318, 323, 328
integrated approaches for detection and diagnosis of disease, 347
Free coat protein
subviral satellite and defective interfering RNAs, 415
Fructose
spermosphere microbial dynamics and interactions, 289–90, 293–94
Fumarate
Ralstonia solanacearum genome and, 110

Functional genomics
type III secretion system effector proteins and, 388–91
Fungicides
biological control of chestnut blight with hypovirulence and, 316
disease progress analysis and, 68–71, 75
Fusarium head blight resistance and, 136, 153
research projections to 2025, 10
Furanone
multi-host/pathogen interactions and, 443
Fusarium head blight
management and resistance to in wheat and barley
biochemical resistance mechanisms, 141–42
breeding for FHB resistance, 149–52
conventional breeding, 149–51
development of disease, 136–37
host resistance stability, 145
inheritance, 145–46
introduction, 135–36
miscellaneous resistance types, 139–41
molecular mapping of QTL for FHB resistance, 146–49
molecular resistance mechanisms, 141–42
new technology for breeding, 151–52
pathogens, 137–38
QTL mapping in barley, 148–49
QTL mapping in wheat, 146–48
resistance sources, 143–44
resistance types, 138–42
sources of inoculum, 136–37
summary, 153–54
type I resistance, 138–39
type II resistance, 138–39
Fusarium spp.
disease progress analysis and, 62, 68, 71
Fusarium head blight resistance and, 137, 142, 145, 152–53
microbial diversity in soil and, 259–61
soil microbial community structure management for disease suppression, 45, 47
spermosphere microbial dynamics and interactions, 271–72, 278–81, 285–87, 293

G

Gaeumannomyces graminis
microbial diversity in soil and, 259–60
soil microbial community structure management for disease suppression, 49, 51
Galactose
spermosphere microbial dynamics and interactions, 294
GC-FAME analysis
soil microbial community structure management for disease suppression, 50
GenBank
nematode molecular diagnostics and, 367–68, 372, 376
Gene clusters
Ralstonia solanacearum genome and, 119–21
systemic acquired resistance and, 197
Gene-for-gene resistance
tobacco mosaic virus and, 29
Gene mapping
disease progress analysis and, 67
Fusarium head blight resistance and, 143, 146–49, 154
Gene pyramiding/stacking
disease progress analysis and, 74
Gene silencing
subviral satellite and defective interfering RNAs, 415
Genetically-modified organisms (GMOs)
history of research, 8–9
Genomic islands
Ralstonia solanacearum genome and, 116
Geocenamus spp.
nematode evolution of plant parasitism and, 93
Geometrical optimization
multi-host/pathogen interactions and, 444–45, 458
Germany
biological control of chestnut blight with hypovirulence and, 315
Germination
multi-host/pathogen interactions and, 441–44, 446
spermosphere microbial dynamics and interactions, 271, 273–83, 285, 290–91, 296
gfp gene
integrated approaches for

detection and diagnosis of disease, 352
Gibberella spp.
Fusarium head blight resistance and, 135, 137, 145
Gibberellins
disease progress analysis and, 71
history of research, 2
Gliocladium spp.
microbial diversity in soil and, 259, 261
spermosphere microbial dynamics and interactions, 281
Globodera spp.
nematode evolution of plant parasitism and, 93–94, 98
nematode molecular diagnostics and, 370, 376–77
Glucanases
Fusarium head blight resistance and, 141
Glucose
spermosphere microbial dynamics and interactions, 293–94
α-Glucosidases
spermosphere microbial dynamics and interactions, 276
Glucosinolates
soil microbial community structure management for disease suppression, 48
Glutamine synthetases
nematode evolution of plant parasitism and, 98
Glutathione *S*-transferases
Ralstonia solanacearum genome and, 116
Gompertz functions
disease progress analysis and, 71, 73–74
Gram-negative bacteria
Ralstonia solanacearum genome and, 113, 117
spermosphere microbial dynamics and interactions, 291
type III secretion system effector proteins and, 385–404
Gram-positive bacteria
microbial diversity in soil and, 253
soil microbial community structure management for disease suppression, 38–39
Grasslands
microbial diversity in soil and, 252, 257
Green fluorescent protein (GFP)
tobacco mosaic virus and, 22
Groundnut rosette virus
subviral satellite and defective interfering RNAs, 415, 429–30
gsp genes
Ralstonia solanacearum genome and, 113–14
Guanylyl cyclase chemoreceptor genes
nematode evolution of plant parasitism and, 97
Guard hypothesis
type III secretion system effector proteins and, 402–3
*gum*GIL genes
comparative genomics analyses of citrus-associated bactria and, 178
Gwm primers
Fusarium head blight resistance and, 147
gyrAB gene
Ralstonia solanacearum genome and, 108

H

Hatching factors
nematode evolution of plant parasitism and, 96
Haustoria
multi-host/pathogen interactions and, 440, 444–51
Head scab
Fusarium head blight resistance and, 135–54
Healing cankers
biological control of chestnut blight with hypovirulence and, 313, 315–17, 319–21, 329–30
Heat shock proteins
tobacco mosaic virus and, 26
Helicocephalum spp.
spermosphere microbial dynamics and interactions, 281
Helicotylenchus sp.
nematode evolution of plant parasitism and, 93
Heliothis virescens
systemic acquired resistance and, 199
Helper viruses
subviral satellite and defective interfering RNAs, 415, 417–19, 424, 430–31
Hemicriconmeioides sp.
nematode evolution of plant parasitism and, 93
Hemicycliophora sp.
nematode evolution of plant parasitism and, 93
Herbicides
disease progress analysis and, 69–70

microbial diversity in soil and, 252
Hesperitan
spermosphere microbial dynamics and interactions, 286
Heterodera spp.
nematode evolution of plant parasitism and, 93–94, 97
nematode molecular diagnostics and, 376–77
HgCLE protein
nematode evolution of plant parasitism and, 99
High-consequence microorganisms
research projections to 2025, 11
Hippurate
Ralstonia solanacearum genome and, 110
Hiring and retention practices
research projections to 2025, 11
HME-RND protein family
Ralstonia solanacearum genome and, 111
Hoplolaimus sp.
nematode evolution of plant parasitism and, 93
Hop proteins
type III secretion system effector proteins and, 385–404
hopPtoH homologue
Ralstonia solanacearum genome and, 122
Hordeum spp.
Fusarium head blight resistance and, 144
Horizontal gene transfer
nematode evolution of plant parasitism and, 83, 98–99
spermosphere microbial dynamics and interactions, 292
Horizontal transmission
biological control of chestnut blight with hypovirulence and, 328
Host committment
multi-host/pathogen interactions and, 439, 444
Host diversity effect
disease progress analysis and, 74
Host range
Ralstonia solanacearum genome and, 107
Host resistance
disease progress analysis and, 70
Fusarium head blight resistance and, 145
tobacco mosaic virus and, 25–27
Hot water treatment
disease progress analysis and, 71
Howardula sp.
nematode molecular diagnostics and, 375
hrp genes
comparative genomics analyses of citrus-associated bacteria and, 174
integrated approaches for detection and diagnosis of disease, 348
Ralstonia solanacearum genome and, 114, 119–21
type III secretion system effector proteins and, 385–404
Hybridoma technology
integrated approaches for detection and diagnosis of disease, 342, 345
Hydration
spermosphere microbial dynamics and interactions, 271, 274–76
Hydrogen peroxide (H_2O_2)
multi-host/pathogen interactions and, 440, 444–45, 448, 451, 457
subviral satellite and defective interfering RNAs, 423
Hydrolases
Ralstonia solanacearum genome and, 110
Hydroquinones
multi-host/pathogen interactions and, 441–43, 445–46
4-Hydroxybenzoate
Ralstonia solanacearum genome and, 110
2-Hydroxy-4,7-dimethoxybenzoxazin-3-one (MDIBOA)
multi-host/pathogen interactions and, 442, 455–56, 458
4-Hydroxy-3-methoxybenzaldehyde
Ralstonia solanacearum genome and, 110
Hypersensitive response
multi-host/pathogen interactions and, 444
systemic acquired resistance and, 185, 191
type III secretion system effector proteins and, 385–404
Hyphal anastomosis
biological control of chestnut blight with hypovirulence and, 328
Hyphal fragments
Fusarium head blight resistance and, 136
Hyphal swellings
spermosphere microbial dynamics and

interactions, 283
Hypovirulence
biological control of chestnut blight with
Asia, 318
conclusions, 329–31
Connecticut, 319
criteria for evaluating, 314–15
epidemiological factors, 328–29
Europe, 315–18
evaluation, 315–22
overview, 312–14
introduction, 311–12
Michigan, 322
North America, 318–22
Ontario, 322
orchards, 316–18
plantations, 316–18
vegetative incompatibility, 322–27
Virginia, 320–21
virulence of hypoviruses to *C. parasitica*, 327–28
virus transmission, 322–27
West Virginia, 319
Wisconsin, 321
disease progress analysis and, 64

I

ICS genes
systemic acquired resistance and, 189–91
IGS region
nematode molecular diagnostics and, 374–75
Imbibition
spermosphere microbial dynamics and interactions, 271, 274–76
Immunodiagnosis
integrated approaches for detection and diagnosis of disease, 339–47, 354–55, 357
Immunofluorescence
integrated approaches for detection and diagnosis of disease, 347, 352
Immunomagnetic separations
integrated approaches for detection and diagnosis of disease, 347, 351–52
IMS-PCR
integrated approaches for detection and diagnosis of disease, 351
Indanones
multi-host/pathogen interactions and, 453
India
tobacco mosaic virus and, 16
Indigenous spermosphere microbial communities
spermosphere microbial dynamics and interactions, 281–82, 296
Induced systemic resistance (ISR)
systemic acquired resistance and, 191
Inflammatory signals
multi-host/pathogen interactions and, 458
Innate resistance
research projections to 2025, 10
tobacco mosaic virus and, 29
Inoculum sources
disease progress analysis and, 66
Fusarium head blight resistance and, 136–37
Insecticides
disease progress analysis and, 70, 75
Insect vector management
research projections to 2025, 10
Integrated pest management (IPM)
disease progress analysis and, 64–65, 75
nematode molecular diagnostics and, 369
Intercellular trafficking
tobacco mosaic virus and, 13, 23–27
Intercropping
disease progress analysis and, 74
Interleukin-1 (IL-1)
tobacco mosaic virus and, 26
Internally transcribed spacer (ITS) regions
nematode molecular diagnostics and, 367, 374, 376–79
Iris spp.
microbial diversity in soil and, 259
Iron uptake
comparative genomics analyses of citrus-associated bacteria and, 174–75
Isochorismate pathway
systemic acquired resistance and, 185, 189
Isoflavones
spermosphere microbial dynamics and interactions, 286
Isoquinoline
Ralstonia solanacearum genome and, 110
Italy
biological control of chestnut blight with hypovirulence and, 311–12, 315, 317, 323–24, 326

ITR element
subviral satellite and defective interfering RNAs, 418

J

Jamestown
tobacco mosaic virus and, 16
Japan
biological control of chestnut blight with hypovirulence and, 318
Fusarium head blight resistance and, 136, 143–46, 151
tobacco mosaic virus and, 16
jar1 gene
systemic acquired resistance and, 199
Jarrah forests
disease progress analysis and, 65
Junk DNA
subviral satellite and defective interfering RNAs, 431

K

Kanosamine
spermosphere microbial dynamics and interactions, 293
kdg genes
comparative genomics analyses of citrus-associated bacteria and, 173
Kentucky
disease progress analysis and, 64
tobacco mosaic virus and, 16, 18–19, 27
Kinases
multi-host/pathogen interactions and, 454, 456
tobacco mosaic virus and, 24
KNOTTED1 gene
tobacco mosaic virus and, 25
Korea
biological control of chestnut blight with hypovirulence and, 318
Fusarium head blight resistance and, 143

L

β-Lactamase genes
Ralstonia solanacearum genome and, 111–12
LasA alkaline phosphatase
Ralstonia solanacearum genome and, 113
Lateral flow devices
integrated approaches for detection and diagnosis of disease, 346
Lateral gene transfer
comparative genomics analyses of citrus-associated bacteria and, 166
Ralstonia solanacearum genome and, 107, 109
Lead resistance
Ralstonia solanacearum genome and, 111–12
LEAFY gene
tobacco mosaic virus and, 25
Leaky capacitor model
multi-host/pathogen interactions and, 448–49
Leaves
Fusarium head blight resistance and, 136
subviral satellite and defective interfering RNAs, 423
Leymus racemosus
Fusarium head blight resistance and, 144
Lignins
multi-host/pathogen interactions and, 458
Ralstonia solanacearum genome and, 110
Limonene
Ralstonia solanacearum genome and, 116
Link Out connections
nematode molecular diagnostics and, 372
Linoleic acid
spermosphere microbial dynamics and interactions, 294
lipA gene
spermosphere microbial dynamics and interactions, 291
Lipid-based signal molecule
systemic acquired resistance and, 185, 187–88
Lipopolysaccharides (LPS)
integrated approaches for detection and diagnosis of disease, 345
Local lesion assays
tobacco mosaic virus and, 23, 25
Longidoroides sp.
nematode evolution of plant parasitism and, 94
Longidorus sp.
nematode evolution of plant parasitism and, 84, 94
LS4 gene
systemic acquired resistance and, 196
Luteolin
spermosphere microbial dynamics and interactions, 286

M
M1H sequence
subviral satellite and defective interfering RNAs, 428
Macroconidia
Fusarium head blight resistance and, 136
spermosphere microbial dynamics and interactions, 286
Macrophominia phaseolina
spermosphere microbial dynamics and interactions, 280
Maize dwarf mosaic virus
disease progress analysis and, 70
Maize streak virus
disease progress analysis and, 67
Maleate
Ralstonia solanacearum genome and, 110
Mango malformation
disease progress analysis and, 75
Mannitol
spermosphere microbial dynamics and interactions, 293
Maryland
tobacco mosaic virus and, 16
MATE protein family
systemic acquired resistance and, 189
Maturity groups
disease progress analysis and, 73
mcp genes
comparative genomics analyses of citrus-associated bacteria and, 176
Medibulla spp.
nematode evolution of plant parasitism and, 90
Medicago trunculata
systemic acquired resistance and, 196
Mediterranean region
disease progress analysis and, 70
Megaplasmid
Ralstonia solanacearum genome and, 108, 111–13
Meloidodera sp.
nematode evolution of plant parasitism and, 92–93
Meloidogyne spp.
microbial diversity in soil and, 261
nematode evolution of plant parasitism and, 92–94, 97–99
nematode molecular diagnostics and, 369–70, 373–76, 378
Melon yellows virus
disease progress analysis and, 68
mer gene
Ralstonia solanacearum genome and, 111
Meristem
multi-host/pathogen interactions and, 440, 444–45, 449
Merlinius spp.
nematode evolution of plant parasitism and, 93
Mesocriconema spp.
nematode evolution of plant parasitism and, 93
Mesorhizobium spp.
Ralstonia solanacearum genome and, 116
spermosphere microbial dynamics and interactions, 295
Metabolism
comparative genomics analyses of citrus-associated bacteria and, 163–64, 173–74
integrated approaches for detection and diagnosis of disease, 355–56
microbial diversity in soil and, 247, 253
multi-host/pathogen interactions and, 439, 443, 448, 450, 457–58
Ralstonia solanacearum genome and, 107, 109–10, 116
soil microbial community structure management for disease suppression, 42
spermosphere microbial dynamics and interactions, 276, 294–95
subviral satellite and defective interfering RNAs, 423
Metabolomics
soil microbial community structure management for disease suppression, 52
Metagenomic libraries
soil microbial community structure management for disease suppression, 43–44
Metal resistance
history of research, 7
Ralstonia solanacearum genome and, 107, 111–12
Mexico
nematode molecular diagnostics and, 378
tobacco mosaic virus and, 16
Michigan
biological control of chestnut blight with hypovirulence and, 311, 313, 318, 322, 330
Microbacterium spp.

history of research, 6
spermosphere microbial dynamics and interactions, 281
Microbial consortia
soil microbial community structure management for disease suppression, 52
Microbial diversity in soil
agricultural management regime, 249–50, 252, 256–58
assessment, 245–49
clone libraries, 246
community structure, 245
conclusions, 262–63
cropping effect, 260–61
cultivation-based methods, 245
cultivation-independent methods, 245–47
function, 255
introduction, 243–44
metabolically-active communities, 247
microbial community fingerprinting techniques, 246–47
plant developmental stage, 254–55
plant type, 249–55
polyphasic approach, 247–49
soil amendment, 261–62
soil effects, 249–50
soil habitat, 244–45
soil management, 249–50, 252, 256–58
soil type, 249–51, 255–56
suppressiveness of soils to plant pathogens, 259–60
tillage, 261–62
Microbial ecology
microbial diversity in soil and, 243–63
nematode molecular diagnostics and, 367–79
soil microbial community structure management for disease suppression, 35–52
spermosphere microbial dynamics and interactions, 271–96
Microbivores
nematode evolution of plant parasitism and, 96
Micrococcus spp.
integrated approaches for detection and diagnosis of disease, 354
spermosphere microbial dynamics and interactions, 281
Microsatellites
Ralstonia solanacearum genome and, 127
Minus-strand induction
subviral satellite and defective interfering RNAs, 415
Missouri
Fusarium head blight resistance and, 151
Mitochondria
biological control of chestnut blight with hypovirulence and, 314
multi-host/pathogen interactions and, 439
nematode molecular diagnostics and, 367, 371, 373, 379
spermosphere microbial dynamics and interactions, 276
Modeltest program
multi-host/pathogen interactions and, 440
nematode evolution of plant parasitism and, 93
Monoclonal antibodies (MAbs)
integrated approaches for detection and diagnosis of disease, 339, 342, 345–46
Mononchida
nematode evolution of plant parasitism and, 91
Monoterpenes
Ralstonia solanacearum genome and, 116
Mosaic disease
tobacco mosaic virus and, 14–15, 20
Movement protein
subviral satellite and defective interfering RNAs, 418–19
tobacco mosaic virus and, 21, 23–25
MPB2C protein
tobacco mosaic virus and, 24
Mt-pgsA gene
nematode evolution of plant parasitism and, 99
Mucor spp.
spermosphere microbial dynamics and interactions, 281
Multi-host/pathogen interactions
chemical biology of *Agrobacterium tumefaciens*, 451–57
charging, 449–50
emerging themes, 450–51
geometrical optimization, 444–45
germination, 441–44
host attachment, 445–50, 452–56
initiating response, 441–44
introduction, 439–41
leaky capacitor model, 448–49
phase I, 441–44

phase II, 444–45
proton transfer moder for phenol perception, 454–56
Scrophulariaceae, 441–51
semagenesis, 444–45
specificity through multi-signal integration, 456–57
Striga asiatica, 441–51
xenogenesis, 457–58
xenognosin perception, 445–50, 452–56
xenognosin signal processing, 448–49
xenognosis, 457–58
Multiplex PCR
integrated approaches for detection and diagnosis of disease, 349
Multiyear/multilocation tests
disease progress analysis and, 72
Mutualism
multi-host/pathogen interactions and, 439, 448
spermosphere microbial dynamics and interactions, 296
Mycosphaerella pinodes
disease progress analysis and, 67

N

Nacobbus spp.
nematode evolution of plant parasitism and, 93–94
nematode molecular diagnostics and, 377–78
Nagelus spp.
nematode evolution of plant parasitism and, 93
nahG gene
systemic acquired resistance and, 187, 189–90, 201
Naphthalene
Ralstonia solanacearum genome and, 110
Natural disease control system
soil microbial community structure management for disease suppression, 35
NCAPP1 protein
tobacco mosaic virus and, 25
Necrosis
olpidium and plasmodiophorid vectors in plant virus transmission, 211, 231–34
subviral satellite and defective interfering RNAs, 424
systemic acquired resistance and, 185
tobacco mosaic virus and, 25–26
Nematode molecular diagnostics
advantages, 368–70
application to all life stages, 369
conclusions, 378–79
DNA barcode, 370–72
emerging parasites, 370
export, 370
genetic divergence, 368
genetic regions commonly used for diagnostics, 372–76
Globodera spp., 376–77
Heterodera spp., 376–77
import, 370
introduction, 367–68
Meloidogyne spp., 373–76
mixed nematode populations, 369
morphologic similarity, 368
Nacobbus spp., 377–78
Pratylenchus spp., 377–78
simplicity, 368–69
speed, 368–69
targeting, 369
Xiphinema spp., 378
Nematodes
evolution of plant parasitism and, 83–100
The Netherlands
integrated approaches for detection and diagnosis of disease, 347
soil microbial community structure management for disease suppression, 43
tobacco mosaic virus and, 14
Neurotransmitters
multi-host/pathogen interactions and, 458
New Jersey
biological control of chestnut blight with hypovirulence and, 313
N genes
tobacco mosaic virus and, 23, 25–26, 29
Nicotiana spp.
subviral satellite and defective interfering RNAs, 417, 422–23, 430
tobacco mosaic virus and, 16–17, 20–22, 24–25, 28–29
nim1 gene
systemic acquired resistance and, 201
Nitrogen
disease progress analysis and, 73
microbial diversity in soil and, 257
multi-host/pathogen interactions and, 439, 452
nematode evolution of plant parasitism and, 99

soil microbial community structure management for disease suppression, 42, 48
systemic acquired resistance and, 200
Nitrogenase
soil microbial community structure management for disease suppression, 41
nod genes
comparative genomics analyses of citrus-associated bacteria and, 179
nematode evolution of plant parasitism and, 98–99
Nonlinear growth functions
disease progress analysis and, 61, 75
North America
biological control of chestnut blight with hypovirulence and, 311–13, 318–25, 328–30
tobacco mosaic virus and, 17
North Carolina
tobacco mosaic virus and, 16
North Dakota
Fusarium head blight resistance and, 150
NPR1 protein
systemic acquired resistance and, 185–86, 191–96, 201–2
nsp genes
comparative genomics analyses of citrus-associated bacteria and, 180
ntr genes
comparative genomics analyses of citrus-associated bacteria and, 179
Nuclear localization signals (NLS)
Ralstonia solanacearum genome and, 115
Nuclear magnetic resonance (NMR)
multi-host/pathogen interactions and, 442
Nucleic acid sequence-based amplification (NASBA)
integrated approaches for detection and diagnosis of disease, 349

O

O/F test
integrated approaches for detection and diagnosis of disease, 356
Ogma decalineatum
nematode evolution of plant parasitism and, 93
Oligonucleotide fingerprinting of rRNA genes (OFRG)
soil microbial community structure management for disease suppression, 45
Oligotrophication
microbial diversity in soil and, 261
Olpidium and plasmodiophorid vectors in plant virus transmission
coat proteins, 221
conclusions, 234
cucumber necrosis virus, 232–34
developmental cycle, 216–18
diseases, 214–16
genome structures, 219–26
introduction, 211–12
in vitro transmission, 219–21, 228–30
in vivo transmission, 221–24, 230–31
O. bornovanus, 232–33
ophiovirus, 223–24
receptors, 232–33
sugars, 232
varicosavirus, 224
viral-encoded proteins, 225, 227–28
virion structures, 219, 223–25
virus acquisition and transmission mechanisms, 228–31
virus/vector relationships, 218–19
viruses transmitted by olpidium, 212–14, 219–24
viruses transmitted by plasmodiophorids, 214–15, 224–28
zoospores, 232–34
"Omics"
tobacco mosaic virus and, 23
Ontario
biological control of chestnut blight with hypovirulence and, 313, 322
Ontogenetic resistance
disease progress analysis and, 75
Oomycete pathogens
spermosphere microbial dynamics and interactions, 273, 281–87
Oomycin A
spermosphere microbial dynamics and interactions, 292–93
Oospore pathogens
spermosphere microbial dynamics and interactions, 283
Open reading frames (ORFs)

comparative genomics
analyses of
citrus-associated bacteria
and, 165
Ralstonia solanacearum
genome and, 118
subviral satellite and
defective interfering
RNAs, 421, 429
tobacco mosaic virus and,
21–22
opr genes
comparative genomics
analyses of
citrus-associated bacteria
and, 173
Orchards
biological control of
chestnut blight with
hypovirulence and,
315–18, 329
Orphan genes
Ralstonia solanacearum
genome and, 111–12

P

P1-ATPases
Ralstonia solanacearum
genome and, 111–12
Paclobutrazol
disease progress analysis
and, 71
pad4 gene
systemic acquired
resistance and, 187
Paenibacillus spp.
microbial diversity in soil
and, 254, 256
spermosphere microbial
dynamics and
interactions, 282
Panicum mosaic virus
subviral satellite and
defective interfering
RNAs, 429
Pantoea spp.
integrated approaches for
detection and diagnosis of
disease, 354
Ralstonia solanacearum
genome and, 122
spermosphere microbial
dynamics and
interactions, 281
Papaya ringspot virus
disease progress analysis
and, 66, 73
parAB gene
Ralstonia solanacearum
genome and, 116
Paralogs
nematode evolution of
plant parasitism and, 98
Paralongidorus sp.
nematode evolution of
plant parasitism and, 94
Parasitism
multi-host/pathogen
interactions and, 439–58
nematode evolution of
plant parasitism and,
83–100
subviral satellite and
defective interfering
RNAs, 430–31
Parasitome
nematode evolution of
plant parasitism and, 97
Paratylenchus sp.
nematode evolution of
plant parasitism and, 93
Parococcus spp.
spermosphere microbial
dynamics and
interactions, 281
Parsimony jacknifing
nematode evolution of
plant parasitism and, 93
Parthenogenesis
nematode molecular
diagnostics and, 373–74,
378
Passiflora spp.
integrated approaches for
detection and diagnosis of
disease, 356
Pastures
microbial diversity in soil
and, 252
Pathozone
spermosphere microbial
dynamics and
interactions, 280
Paxillus involutus
soil microbial community
structure management for
disease suppression, 42
pbr gene
Ralstonia solanacearum
genome and, 111
PCR-DGGE
microbial diversity in soil
and, 246, 251, 253–55,
257
soil microbial community
structure management for
disease suppression, 47,
49
PCR-RFLP
nematode molecular
diagnostics and, 368,
375–77
PCR-TGGE
microbial diversity in soil
and, 251, 253
Pea enation mosaic virus
subviral satellite and
defective interfering
RNAs, 430
Pectinases
nematode evolution of
plant parasitism and, 98
Ralstonia solanacearum
genome and, 110, 113
Pectin methylesterase
tobacco mosaic virus and,
24
Penicillium spp.
microbial diversity in soil
and, 259
spermosphere microbial

dynamics and interactions, 281
Peronospora tabacina
tobacco mosaic virus and, 28
Peroxidases
multi-host/pathogen interactions and, 440, 445, 457
Pesticides
microbial diversity in soil and, 256
pfkA gene
spermosphere microbial dynamics and interactions, 289–90
pglA gene
Ralstonia solanacearum genome and, 121
Phaseolus vulgaris
disease progress analysis and, 67
phcA gene
Ralstonia solanacearum genome and, 127
Phenazine
spermosphere microbial dynamics and interactions, 292
Phenols
Fusarium head blight resistance and, 142
multi-host/pathogen interactions and, 444–45, 452–58
Ralstonia solanacearum genome and, 110
spermosphere microbial dynamics and interactions, 276–77
Phenotypic switching
Ralstonia solanacearum genome and, 127
Phenylalanine ammonia lyase
Fusarium head blight resistance and, 141
Pheromones
multi-host/pathogen interactions and, 452, 458
phlD gene
soil microbial community structure management for disease suppression, 46, 50
Phosphodiesterases
spermosphere microbial dynamics and interactions, 286
Phospholipid fatty acid (PLFA) analysis
soil microbial community structure management for disease suppression, 39
Photosynthesis
multi-host/pathogen interactions and, 440–41
Phyllobacterium spp.
microbial diversity in soil and, 252
Phyllosphere microbial biota
research projections to 2025, 10
Phylogeny
nematode evolution of plant parasitism and, 83–100
nematode molecular diagnostics and, 371–72, 376
subviral satellite and defective interfering RNAs, 424–25
Phytobacteriology
history of research, 3–7
Phytophthora spp.
disease progress analysis and, 62, 67, 71
microbial diversity in soil and, 259, 261
soil microbial community structure management for disease suppression, 43
systemic acquired resistance and, 187, 189
Phytoplasmas
research projections to 2025, 10
Phytosanitary regulations
science-based decision making and, 9
phz gene
spermosphere microbial dynamics and interactions, 292–93
pil genes
comparative genomics analyses of citrus-associated bacteria and, 163–64, 168, 179
Ralstonia solanacearum genome and, 118
Pinus sylvestris
soil microbial community structure management for disease suppression, 42
Pisatin
spermosphere microbial dynamics and interactions, 286
Plantations
biological control of chestnut blight with hypovirulence and, 316–29
Plant effect
microbial diversity in soil and, 243, 249–55
Plant parasitism
evolution of among nematodes
Aphelenchida, 87
biochemistry, 96–99
conclusions, 99–100
convergent specializations of feeding styles, 92–94
dispersal stage, 95–96
dormant stage, 95–96
Dorylaimida, 85–86
exploitation, 92–96
genetics, 96–99

infective stage, 95–96
introduction, 83–85
life cycle, 95–96
morphological specializations, 87–91
multiple origins, 85–87
perspectives, 99–100
pharynx, 90–91
stylet, 87–90
Triplonchida, 85–86
Tylenchida, 85–87
virus transmission, 94–95
Plasmodiophorid vectors
olpidium vectors in plant virus transmission and, 211–34
plt gene
spermosphere microbial dynamics and interactions, 292
Polygalacturonases
Ralstonia solanacearum genome and, 110, 113
Polyglutamate synthetases
nematode evolution of plant parasitism and, 98
3-Polyhydroxyburitic acid
Ralstonia solanacearum genome and, 110
Polymerase chain reaction (PCR)
integrated approaches for detection and diagnosis of disease, 340, 347–49, 351–52, 354–55, 357
microbial diversity in soil and, 245–47, 261
nematode molecular diagnostics and, 367–69, 372, 374–77
soil microbial community structure management for disease suppression, 36, 39–43, 45, 47, 49
Polyoxyalkalonates
Ralstonia solanacearum genome and, 110
Polyphasic analysis
integrated approaches for detection and diagnosis of disease, 339, 352, 356
microbial diversity in soil and, 247–49
Polysaccharide depolymerase
history of research, 6
pop genes
Ralstonia solanacearum genome and, 114–16, 120–22, 124, 127
Population ecology
disease progress analysis and, 63, 75
integrated approaches for detection and diagnosis of disease, 342, 345
spermosphere microbial dynamics and interactions, 288
Portugal
biological control of chestnut blight with hypovirulence and, 315
Posttranscriptional gene silencing
subviral satellite and defective interfering RNAs, 415, 417–21, 424, 427, 431
Potato blight
disease progress analysis and, 75
PR genes
Fusarium head blight resistance and, 141
systemic acquired resistance and, 185–86, 188, 190–201
Pratylenchoides magnicauda
nematode evolution of plant parasitism and, 93
Pratylenchus spp.
nematode evolution of plant parasitism and, 93, 98
nematode molecular diagnostics and, 377–78
prh genes
Ralstonia solanacearum genome and, 121
*prn*D gene
microbial diversity in soil and, 261
Programmed cell death
subviral satellite and defective interfering RNAs, 415, 422–23
26S Proteasome
tobacco mosaic virus and, 22–23, 25–26
Protein secretion systems
Ralstonia solanacearum genome and, 107, 111, 113, 115–16
Protein tyrosine phosphatase
type III secretion system effector proteins and, 385
Protists
olpidium and plasmodiophorid vectors in plant virus transmission, 211–34
Protocatechuates
Ralstonia solanacearum genome and, 110
Proton transfer
multi-host/pathogen interactions and, 439–40, 445, 454–58
Pseudomonas spp.
comparative genomics analyses of citrus-associated bacteria and, 168, 173
history of research, 6, 8
integrated approaches for detection and diagnosis of disease, 343, 345, 349–50, 354
microbial diversity in soil

and, 246, 248, 250, 252, 256–60
Ralstonia solanacearum genome and, 110, 113–15, 118–20, 122, 125
soil microbial community structure management for disease suppression, 35, 46, 48–51
spermosphere microbial dynamics and interactions, 281, 287–89, 291–93, 295
systemic acquired resistance and, 187–88, 190, 194, 198–99
type III secretion system effector proteins and, 385–404
Psilenchus sp.
nematode evolution of plant parasitism and, 93
Pterocarpans
spermosphere microbial dynamics and interactions, 286
pthA gene
integrated approaches for detection and diagnosis of disease, 348, 350
Ralstonia solanacearum genome and, 125
Public health
tobacco mosaic virus and, 13–29
Public policy
biotechnology and, 1, 5, 7–9
Puccinia spp.
disease progress analysis and, 66, 68
Pueraria javanica
microbial diversity in soil and, 260–61
Pulsed field gel electrophoresis (PFGE)
Ralstonia solanacearum genome and, 108
Punctodera sp.
nematode evolution of plant parasitism and, 93
pur genes
comparative genomics analyses of citrus-associated bacteria and, 180
Pyoluteorin
spermosphere microbial dynamics and interactions, 292
Pythium spp.
disease progress analysis and, 72
microbial diversity in soil and, 259, 261
soil microbial community structure management for disease suppression, 43, 46–47
spermosphere microbial dynamics and interactions, 271, 278, 280–81, 283–85, 288, 293–94

Q

Quantitative trait loci (QTL)
disease progress analysis and, 67
Fusarium head blight resistance and, 135, 141, 146–49, 153–54
Quarantine determinations
nematode molecular diagnostics and, 367
Quinisulcius sp.
nematode evolution of plant parasitism and, 93
Quinones
multi-host/pathogen interactions and, 440–43, 445–48
Quorum sensing
multi-host/pathogen interactions and, 452, 458
spermosphere microbial dynamics and interactions, 289

R

Radicle
spermosphere microbial dynamics and interactions, 273, 276, 280
Radopholus sp.
nematode evolution of plant parasitism and, 93
Ralstonia solanacearum
genome sequence of strain GMI1000
AvrB3 effector family, 126
AvrBs3 gene family, 126
bacterial adhesion, 117–18
bipartite genome, 108–9
coevolution of *hrp* gene cluster with core genome, 119–20
conclusions, 128–29
conjugative transposon, 116–17
contingency loci, 127–28
drug resistance, 111–12
elimination, 126–28
evolution of virulence, 119–28
genome structure, 108–9
hrp gene clusters, 119–21
hrp genes, 114
introduction, 107–8
metal resistance, 111–12
mosaic structure, 109
motility, 117–18
mutation, 126–28
overview, 109–10
plant surveillance system, 115–16

protein secretion systems, 111, 113, 115–16
(reversible) gene inactivation, 126–27
type II secretion systems, 113–14
type III secretion system (TTSS), 114–16, 121–26
type IV secretion genes, 116–17
integrated approaches for detection and diagnosis of disease, 343, 346–47, 349, 351–52, 354
microbial diversity in soil and, 261
RAPD PCR
integrated approaches for detection and diagnosis of disease, 356
nematode molecular diagnostics and, 375
rDNA
integrated approaches for detection and diagnosis of disease, 341, 356
microbial diversity in soil and, 246–47, 249, 253, 257
nematode molecular diagnostics and, 367, 371–73, 379
Ralstonia solanacearum genome and, 108
soil microbial community structure management for disease suppression, 45, 47, 50
Reactive oxygen species (ROS)
multi-host/pathogen interactions and, 444
systemic acquired resistance and, 188, 191
Real-time PCR
integrated approaches for detection and diagnosis of disease, 349
soil microbial community structure management for disease suppression, 42–43
recA gene
integrated approaches for detection and diagnosis of disease, 348
Redox reactions
multi-host/pathogen interactions and, 440, 443, 445–46, 448, 450
systemic acquired resistance and, 194–96
Reductases
multi-host/pathogen interactions and, 447
repA gene
Ralstonia solanacearum genome and, 108, 116
Replicases
tobacco mosaic virus and, 21, 26
REP-PCR
integrated approaches for detection and diagnosis of disease, 356
microbial diversity in soil and, 251
Resistance
disease progress analysis and, 68, 70–72, 75
Fusarium head blight resistance and, 135–36, 138–52
Ralstonia solanacearum genome and, 107. 111–12, 115
systemic acquired resistance and, 185–202
tobacco mosaic virus and, 22, 29
Restriction and modification (RM) system
comparative genomics analyses of citrus-associated bacteria and, 180
Restriction fragment length polymorphism (RFLP)
biological control of chestnut blight with hypovirulence and, 324
integrated approaches for detection and diagnosis of disease, 342, 356
nematode molecular diagnostics and, 368, 375–77
soil microbial community structure management for disease suppression, 50
Reverse transcriptase-PCR (RT-PCR)
microbial diversity in soil and, 245, 251
R genes
disease progress analysis and, 67
systemic acquired resistance and, 187–88, 190
tobacco mosaic virus and, 26
Rhabditina
nematode evolution of plant parasitism and, 89, 91, 96
Rhizobium spp.
microbial diversity in soil and, 248, 257
nematode evolution of plant parasitism and, 99
soil microbial community structure management for disease suppression, 45
spermosphere microbial dynamics and interactions, 288, 295
Rhizoctonia spp.
disease progress analysis

and, 66
microbial diversity in soil and, 258–62
soil microbial community structure management for disease suppression, 47–50
spermosphere microbial dynamics and interactions, 278, 288, 293
Rhizosphere
microbial diversity in soil and, 243–63
multi-host/pathogen interactions and, 444
nematode evolution of plant parasitism and, 84
soil microbial community structure management for disease suppression, 38–39, 41, 48, 50–51
spermosphere microbial dynamics and interactions, 271, 273, 281, 283, 285, 287, 292, 295–96
Ribosomal intergenic spacer length polymorphism (RISA)
microbial diversity in soil and, 246
rip genes
Ralstonia solanacearum genome and, 115, 121–22
RNA viruses
tobacco mosaic virus and, 13–29
rnpA gene
Ralstonia solanacearum genome and, 108
Roegneria spp.
Fusarium head blight resistance and, 144, 152
Romania
Fusarium head blight resistance and, 143
Root knot nematodes
nematode evolution of plant parasitism and, 98–99
nematode molecular diagnostics and, 369–70, 274
Roots
microbial diversity in soil and, 250, 252–53, 255
multi-host/pathogen interactions and, 440, 444–45, 449
spermosphere microbial dynamics and interactions, 279, 283
Rotylenchus sp.
nematode evolution of plant parasitism and, 92–94, 98
rpf genes
comparative genomics analyses of citrus-associated bacteria and, 173, 176–77
rpiA gene
spermosphere microbial dynamics and interactions, 290
rpoA gene
multi-host/pathogen interactions and, 454
rRNA
integrated approaches for detection and diagnosis of disease, 348
microbial diversity in soil and, 246–47, 254
nematode evolution of plant parasitism and, 83, 85–86, 89, 91–94, 96
nematode molecular diagnostics and, 372
soil microbial community structure management for disease suppression, 39–40, 42–43, 45
Rub-inoculation
tobacco mosaic virus and, 18, 22, 25
Russia
tobacco mosaic virus and, 16

S

SABP2 gene
systemic acquired resistance and, 188
SaExp genes
multi-host/pathogen interactions and, 449–50
Salicylic acid
disease progress analysis and, 70
systemic acquired resistance and, 185–87, 189–96
Salmonella enterica
comparative genomics analyses of citrus-associated bacteria and, 168
Saprophytes
disease progress analysis and, 63
Fusarium head blight resistance and, 135–54
Ralstonia solanacearum genome and, 109–10
Sarisodera sp.
nematode evolution of plant parasitism and, 92
Satellite RNA (satRNA)
subviral
defective interfering RNAs and, 415–31
Scab
Fusarium head blight resistance and, 135–54
Scotland
nematode molecular diagnostics and, 371
Scrophulariaceae
multi-host/pathogen

interactions and, 441–51
Scutellonema sp.
nematode evolution of plant parasitism and, 93
Secernentea
nematode evolution of plant parasitism and, 87–91, 95–96
Secondary cell death
subviral satellite and defective interfering RNAs, 423
Secondary messengers
multi-host/pathogen interactions and, 444, 458
Sedentary parasitism
nematode evolution of plant parasitism and, 92, 94, 96
Seed exudation
multi-host/pathogen interactions and, 442
spermosphere microbial dynamics and interactions, 271, 274–79, 282, 287–88, 293–96
Semagenesis
multi-host/pathogen interactions and, 439–57
Semiquinones
multi-host/pathogen interactions and, 446–47
Senecio vulgaris
disease progress analysis and, 66
Serratia spp.
microbial diversity in soil and, 248, 259
Setosphaeria turcica
disease progress analysis and, 67
Sexual reproduction
biological control of chestnut blight with hypovirulence and, 329
SFD1 gene
systemic acquired resistance and, 188
Shannon diversity index
biological control of chestnut blight with hypovirulence and, 324–26
sid genes
systemic acquired resistance and, 189
Signaling
multi-host/pathogen interactions and, 440–41, 444–45, 448–51, 454, 456–58
systemic acquired resistance and, 185–202
sil gene
Ralstonia solanacearum genome and, 111
Silthiofam
disease progress analysis and, 69
Single-strand conformational polymorphism (SSCP)
microbial diversity in soil and, 246
Sinnapyl alcohol
multi-host/pathogen interactions and, 453
Sinorhizobium spp.
spermosphere microbial dynamics and interactions, 295
Size exclusion limit
tobacco mosaic virus and, 23–25
snc1 gene
systemic acquired resistance and, 190
sni1 gene
systemic acquired resistance and, 196–97
Soil microbial community structure
assessment and management for disease suppression amendments, 46–48
biological elements contributing to soil suppressiveness, 44–46
characterization of soil microflora, 37–40
conclusions, 51–52
cropping systems, 48–51
DNA arrays, 43
DNA-based methods, 40–43
fatty acid methyl ester profiles, 39–40
introduction, 35–37
management, 46
metagenomic libraries, 43–44
PCR methods, 40–43
real-time PCR, 42–43
substrate utilization profiles, 38–39
Soil microbiology
disease progress analysis and, 71
microbial diversity in soil and, 243–63
nematode molecular diagnostics and, 367–79
Solanum spp.
disease progress analysis and, 67
Solar energy
multi-host/pathogen interactions and, 439
Sorbose
spermosphere microbial dynamics and interactions, 293
Sorghum halepense
disease progress analysis and, 70
Sorghum xenognosin (SXSg)
multi-host/pathogen interactions and, 441–43, 445
Sorgoleone
multi-host/pathogen

interactions and, 442
South America
comparative genomics
analyses of
citrus-associated bacteria
and, 166, 168
nematode molecular
diagnostics and, 378
Sowing
disease progress analysis
and, 73–74
spermosphere microbial
dynamics and
interactions, 288, 292
Spain
biological control of
chestnut blight with
hypovirulence and, 323
subviral satellite and
defective interfering
RNAs, 423–24
Spatial dynamics
disease progress analysis
and, 62–64, 75
microbial diversity in soil
and, 253, 262–63
multi-host/pathogen
interactions and, 441,
450, 458
spermosphere microbial
dynamics and
interactions, 279
Specimen voucher web pages
nematode molecular
diagnostics and, 367
Spermosphere
microbial dynamics and
interactions in
antibiotic synthesis,
292–93
Bacillus cereus, 293
biological control, 287
chemotaxis, 287–88
colonization by
introduced strains,
288–90
conclusions, 295–96
definition, 272–73
development, 273–81
fungal pathogens,
282–87
Fusarium solani f. sp.
phaseoli, 285–86
Fusarium solani f. sp.
pisi, 286–87
gene expression, 291
indigenous
spermosphere
microbial communities,
281–82
introduction, 271–73
key historical
observations, 272–73
microbiology, 281–82
comycete pathogens,
282–87
pathogen responses, 287
plasmid transfer, 291–92
Pseudomonas spp.,
292–93
Pythium
aphanidermatum, 285
Pythium ultimum,
283–85
regulation of microbial
behavior, 282–95
schematic
representation, 272
seed exudation, 274–79,
293–95
seed germination,
273–81
size of sphermosphere,
279–81
water imbibition,
274–76
Sporidesmium spp.
microbial diversity in soil
and, 259
Sporulation
disease progress analysis
and, 66, 74
ssi4 gene
systemic acquired
resistance and, 190
ssn1 gene
systemic acquired
resistance and, 196–97
Stachydrine
Ralstonia solanacearum
genome and, 110
Stachyose
spermosphere microbial
dynamics and
interactions, 294
Stagnospora nodorum
disease progress analysis
and, 62
Stenotrophomonas
maltophilia
integrated approaches for
detection and diagnosis of
disease, 354
Sterilization
soil microbial community
structure management for
disease suppression,
47–48
Steroid hormones
multi-host/pathogen
interactions and, 458
Streptococcus faecium
history of research, 3
Streptomyces spp.
soil microbial community
structure management for
disease suppression,
48
Striga asiatica
multi-host/pathogen
interactions and, 439–51,
457–58
Strigol
multi-host/pathogen
interactions and, 440,
443, 445
Strongylida
nematode evolution of
plant parasitism and, 96
Stylet
nematode evolution of

plant parasitism and, 87–90, 97
Subgenomic RNA
tobacco mosaic virus and, 21–22
Subspecific variation
integrated approaches for detection and diagnosis of disease, 345
Substrate utilization profiles
soil microbial community structure management for disease suppression, 38–39, 52
Subtractive hybridization (SSH) libraries
Fusarium head blight resistance and, 142
Subviral RNAs
satellite and defective interfering RNAs
competition, 417–19
conclusions, 430–31
cucumber mosaic virus, 421–25
defective interfering RNAs, 416–21
evolution, 423
fitness, 428–30
groundnut rosette virus, 429–30
helper virus, 417–19
introduction, 415–16
panicum mosaic virus, 429
posttranscriptional gene silencing, 420–21
satC, 426, 427–29
satellite RNAs, 421
satellite viruses, 421
tombusviruses, 417–21
turnip crinkle virus, 425–29
Succinate
Ralstonia solanacearum genome and, 110
Sucrose
spermosphere microbial dynamics and interactions, 293–94
Sugar alcohols
spermosphere microbial dynamics and interactions, 277
Sugar transporters
comparative genomics analyses of citrus-associated bacteria and, 163–64, 173
Suillus bovines
soil microbial community structure management for disease suppression, 42
Sulfite
Ralstonia solanacearum genome and, 110
Sumai 3 wheat cultivar
Fusarium head blight resistance and, 135, 139, 141, 143–45, 147, 150–51, 153
Superoxide dismutase
Fusarium head blight resistance and, 141
Suppressive soils
microbial diversity in soil and, 259–60
soil microbial community structure management for disease suppression, 35–52
Surface energy balance model
disease progress analysis and, 64
Switzerland
biological control of chestnut blight with hypovirulence and, 315, 317, 324
Symbiosis island
Ralstonia solanacearum genome and, 116
Symbiotic infections
multi-host/pathogen interactions and, 439
syrD gene
integrated approaches for detection and diagnosis of disease, 348
Systemic acquired resistance (SAR)
conclusions, 202
fitness costs, 200–2
gene expression, 197–99
inducers, 10, 70
introduction, 185–86
lipid-based signal molecule, 187–88
miscellaneous defense pathways, 199–200
NPR1, 191–96
reactive oxygen species, 188
redox signaling, 194–96
regulatory components, 196–97
salicylic acid, 186–87, 189–96
systemic signal, 186–88
TGA transcription factors, 192–94
transport, 188

T

*Ta*1 gene
Fusarium head blight resistance and, 151
tad genes
Ralstonia solanacearum genome and, 118, 127
Taxonomy
nematode molecular diagnostics and, 367–79
T-DNA
multi-host/pathogen interactions and, 451–52
Telemedicine
research projections to 2025, 10
Temperature gradient gel electrophoresis (TGGE)

microbial diversity in soil and, 246, 251, 253
soil microbial community structure management for disease suppression, 41
Temporal effects
microbial diversity in soil and, 253, 262–63
multi-host/pathogen interactions and, 441, 450, 458
spermosphere microbial dynamics and interactions, 279, 282
Terminal restriction fragment length polymorphism (T-RFLP)
microbial diversity in soil and, 246
soil microbial community structure management for disease suppression, 36, 41, 43
Terpenes
Ralstonia solanacearum genome and, 116
Tetrafluorobenzoquinone (TFBQ)
multi-host/pathogen interactions and, 447
TGA transcription factors
systemic acquired resistance and, 185, 192–94
Thaumatin-like proteins
Fusarium head blight resistance and, 141
Theobroma grandiflorum
disease progress analysis and, 66
Thraustotheca spp.
spermosphere microbial dynamics and interactions, 281
Three-species reaction-diffusion model
disease progress analysis and, 63
L-Threonine aldolase
nematode evolution of plant parasitism and, 98
Tillage
disease progress analysis and, 72
microbial diversity in soil and, 261–62
soil microbial community structure management for disease suppression, 38
TIR-NB-LRR resistance proteins
Ralstonia solanacearum genome and, 115
systemic acquired resistance and, 187, 190
tobacco mosaic virus and, 26
Tobacco mosaic virus
agriculture, 15–20
cell biology, 23–27
conclusions, 29
health, 27–29
host resistance, 25–27
intercellular trafficking, 23–27
introduction, 13–14
model systems, 18, 21–23
movement, 23–27
reasons for studying, 14–15
systemic acquired resistance and, 185–86
United States, 15–20
Toluate
Ralstonia solanacearum genome and, 110
TOM-CAST forecasting model
disease progress analysis and, 64
Tomato bushy stunt virus
subviral satellite and defective interfering RNAs, 415
Tomato mosaic virus
tobacco mosaic virus and, 26–27
Tomato spotted wilt virus
disease progress analysis and, 71
Tombusviruses
subviral satellite and defective interfering RNAs, 417–21
TR1101 gene
Fusarium head blight resistance and, 152
tra gene
multi-host/pathogen interactions and, 452
Transcriptomics
Ralstonia solanacearum genome and, 129
trb gene
multi-host/pathogen interactions and, 452
Tree of Life project (NSF)
nematode evolution of plant parasitism and, 100
nematode molecular diagnostics and, 367, 372, 379
Trees
biological control of chestnut blight with hypovirulence and, 311–31
Trichoderma spp.
microbial diversity in soil and, 259, 261
spermosphere microbial dynamics and interactions, 281, 293
Trichodorus spp.
nematode evolution of plant parasitism and, 84
Tri genes
Fusarium head blight resistance and, 142
Triplonchida
nematode evolution of

plant parasitism and, 83, 85–88, 95
Triticum spp.
Fusarium head blight resistance and, 144, 152
tRNA
nematode molecular diagnostics and, 375
Ralstonia solanacearum genome and, 108–9, 120
tobacco mosaic virus and, 21
tsr genes
comparative genomics analyses of citrus-associated bacteria and, 176
Turkey
biological control of chestnut blight with hypovirulence and, 315
Turnip crinkle virus
subviral satellite and defective interfering RNAs, 415, 425–29
Twitching motility
Ralstonia solanacearum genome and, 117–18
Tylenchida
nematode evolution of plant parasitism and, 83, 85–93, 95–96, 99
Tylenchorhynchus spp.
nematode evolution of plant parasitism and, 93
Tylenchulus sp.
nematode evolution of plant parasitism and, 93, 94
Tylopharynx sp.
nematode evolution of plant parasitism and, 88
Type II secretion system (T2SS)
comparative genomics analyses of citrus-associated bacteria and, 163–64, 168, 172
Ralstonia solanacearum genome and, 113–14
Type III secretion system (TTSS)
comparative genomics analyses of citrus-associated bacteria and, 163–64, 175–76
Ralstonia solanacearum genome and, 114–16, 121–26
Type III secretion system (TTSS) effector proteins
bacterium-plant coevolution, 402–3
basal defenses, 387–88
cell death, 387–88
comparative genomics, 388–91
conclusions, 403–4
cytoplasmic chaperones, 391–92
delivery, 391–94
double agent hypothesis, 401–4
enzymatic activities, 397–400
extracellular TTSS pathway proteins, 392–94
functional genomics, 388–91
functions, 394–403
genomic context, 390–91
guard hypothesis, 402–3
hypersensitive response, 387
introduction, 385–87
localization, 400–1
multiple functions, 403–4
sequenced phytopathogen genomes, 388–90
specializations for phytopathogens, 391–94
suppression of plant defenses, 394–99
virulence phenotypes, 401–2
Type IV pili biosynthesis
comparative genomics analyses of citrus-associated bacteria and, 163–64, 179
Type IV secretion genes
Ralstonia solanacearum genome and, 116–17

U

Ubiquinone
multi-host/pathogen interactions and, 442–43
Ubiquitin/26S proteasome pathway
tobacco mosaic virus and, 22–26
Uganda
disease progress analysis and, 71
United Kingdom
disease progress analysis and, 74
United States
biological control of chestnut blight with hypovirulence and, 311, 313, 319–24, 329–30
Fusarium head blight resistance and, 136, 143, 145, 150
microbial diversity in soil and, 249, 262
tobacco mosaic virus and, 15–20, 27
Uromyces vignae
disease progress analysis and, 67

V

Vanillin
Ralstonia solanacearum genome and, 110
Varicosavirus
olpidium and

plasmodiophorid vectors in plant virus transmission, 224
Varietal mixtures
disease progress analysis and, 74
Variovorax spp.
microbial diversity in soil and, 252
vc-type diversity
biological control of chestnut blight with hypovirulence and, 323–27
Vegetative incompatibility
biological control of chestnut blight with hypovirulence and, 311, 316, 322–27
Vertical transmission
biological control of chestnut blight with hypovirulence and, 327
Verticillum dahliae
microbial diversity in soil and, 255
vic genes
biological control of chestnut blight with hypovirulence and, 323
Vidaver AK, 1–11
vir genes
multi-host/pathogen interactions and, 452–54, 456, 458
Virginia
biological control of chestnut blight with hypovirulence and, 320–21
tobacco mosaic virus and, 16, 18
Virtual reenactment of disease progression
research projections to 2025, 10
Virulence
biological control of chestnut blight with hypovirulence and, 311–31
Ralstonia solanacearum genome and, 107, 113, 119–28
type III secretion system effector proteins and, 385–404
Virus-induced gene silencing
subviral satellite and defective interfering RNAs, 415
Vitamin K
multi-host/pathogen interactions and, 442–43
Volatiles
spermosphere microbial dynamics and interactions, 277–78

W

Water imbibition
spermosphere microbial dynamics and interactions, 271, 274–76
Western Australia
disease progress analysis and, 65
West Indies
tobacco mosaic virus and, 16
West Virginia
biological control of chestnut blight with hypovirulence and, 319
Wheat
Fusarium head blight resistance and, 135–54
Wisconsin
biological control of chestnut blight with hypovirulence and, 321, 327
Women in science
history of research, 1–11
WRKY domain
Ralstonia solanacearum genome and, 115

X

Xanthan gum biosynthesis genes
comparative genomics analyses of citrus-associated bacteria and, 178
Xanthobacter spp.
spermosphere microbial dynamics and interactions, 281
Xanthomonadins
comparative genomics analyses of citrus-associated bacteria and, 168, 177–78
Xanthomonas spp.
comparative genomics analyses of citrus-associated bacteria and, 163, 166–80
history of research, 6
integrated approaches for detection and diagnosis of disease, 342–47, 349–51, 353–54, 356
microbial diversity in soil and, 248
Ralstonia solanacearum genome and, 115, 117–18, 120, 122, 125–26
type III secretion system effector proteins and, 385–404
xcm genes
Ralstonia solanacearum genome and, 114
Xenognosis
multi-host/pathogen interactions and, 439–58
Xgwm 2 SSR marker

Fusarium head blight
resistance and, 148
Xiphidorus sp.
nematode evolution of plant parasitism and, 94
Xiphinema spp.
nematode evolution of plant parasitism and, 84, 94
nematode molecular diagnostics and, 378
xopD gene
Ralstonia solanacearum genome and, 120
Xylella fastidiosa 9a5c (XF-9a5c)
comparative genomics analyses of citrus-associated bacteria and, 163, 165–80
Xyllela fastidiosum
Ralstonia solanacearum genome and, 117
Xylophilus amelinus
integrated approaches for detection and diagnosis of disease, 344

Y

Yeast
tobacco mosaic virus and, 18
Yersinia spp.
Ralstonia solanacearum genome and, 115
Yield loss
disease progress analysis and, 66–67, 69
yop genes
Ralstonia solanacearum genome and, 115, 121, 124
Yucatan
tobacco mosaic virus and, 16

Z

Zea mays
multi-host/pathogen interactions and, 442
Zoospores
olpidium and plasmodiophorid vectors in plant virus transmission, 211–34
spermosphere microbial dynamics and interactions, 283, 285, 287–88
Zwittermicin A
spermosphere microbial dynamics and interactions, 293
